OBJECTIVE

To contribute as a Software Developer by building reliable, scalable, and well-structured systems, while continuously improving product quality and development efficiency. With hands-on experience in framework development, feature implementation, production issue resolution, and cross-platform collaboration, I aim to bring strong ownership, adaptability, and practical problem-solving to the team while learning and growing alongside evolving technologies.

TECHNICAL SKILLS

What I work on
Framework Development
Feature Development
Cross-Platform Development
Debugging and Bug Fixing
Product Scalability
Performance Improvements
Product's Testing Automation
UI and Layout Systems

Frameworks / Technologies
Skia
Protocol Buffers
WebAssembly
Next.js

Languages
C, C++
Java
Javascript

Tools
Git
Claude Code
Github Copilot
VSCode
Xcode
Android Studio

ACCOMPLISHMENTS

- **Appreciated by the Product Head** for designing a scalable foundational protobuf structure for the Auto-Layout feature, which later enabled multiple major product capabilities.
- **Recognized by the Manager for effective Planning and Execution** in prioritizing and resolving a high volume of QA-reported issues during the Phase 1 release of Auto-Layout within the committed timeline.
- **Appreciated by the Product Head** for stepping in during a **critical customer escalation**, collaborating with the team to resolve a production issue outside my primary module while the module owner was unavailable, and helping ship the fix within the same day.
- **Recognized by the Manager, Team Lead, and QA Lead** for building an internal **Automation Portal** that improved developer efficiency by reducing dependency on QA teams for automation execution.
- **Appreciated by the Marketing Lead** for contributing to **customer-requested Auto-Layout features** that became strong adoption drivers and important highlights in product demonstrations.

PROFESSIONAL EXPERIENCE

Member Technical Staff @ Zoho Corporation
Sep 2024 – Present

Worked in the **Framework team** of **Vani**, a collaborative whiteboard and business demo platform used by enterprises for meetings, knowledge sharing, planning, and design workflows.

- Built the **Auto-Layout** feature from foundation, following which features like Stacks, Mind Maps, and Kanban Boards were developed and shipped.
- Mind Maps and Kanban Boards were **customer-driven features** that gained strong enterprise adoption and became prominent showcases in product demonstrations and expos.
- Contributed to the product's large-scale rewrite focused on scalability, cleaner architecture, and long-term maintainability.
- Migrated and rebuilt features from the older product model into the new scalable system.

- Supported internal design teams in creating templates using the Auto-Layout system.
- Provided and maintained **multiple internal APIs** to support the QA team during the initial setup of their Automation testing workflows.
- Resolved **300+ bugs**, including regression issues, rendering problems, memory leaks, and critical customer-reported defects.
- Worked across **Web**, **iOS**, **macOS**, and **Android** through a shared C++ codebase, ensuring feature consistency across platforms.
- Collaborated with platform teams to debug framework-level issues using **Xcode** and **Android Studio**, identifying root causes and delivering fixes.
- **Adapted AI** into daily development workflows, progressing from **handling repetitive tasks** to building complete **end-to-end features** involving changes across multiple repositories, improving development speed and efficiency.
- Maintained similar delivery speed and output quality even during periods without company-provided AI resources.
- Prioritized work effectively during critical releases and supported teammates in completing **high-priority tasks** when needed.

EDUCATION

Bachelor of Technology 9.3 CGPA
Dept: Information Technology
R.M.D. Engineering College, Gummidipoondi, Tamil Nadu - 601201
2020-2024

ACADEMIC ACHIEVEMENTS

- Winner, Interdepartmental Mini Project Competition for fully functional **E-commerce web application** using Next.js (2023)
- Runner-up, International **Paper Presentation Competition** at VIT, representing R.M.D. Engineering College (2023)
- Overall Individual Champion in **Powerlifting** at R.M.D. Engineering College (2023)
- Bronze Medalist in **Anna University Best Physique Competition**, representing R.M.D. Engineering College (2023)

PERSONAL PROJECTS

- Built a **crowdfunding platform** using Next.js and MongoDB that enables users to raise funds for personal needs and support community-driven causes.
- Developed **E-commerce platforms** for a sweet shop and local electronics store with secure checkout, and payment flow, and improved customer experience for local businesses.
- Developed a web-based **blood donation** and **donor management system** to simplify registration, donor discovery, and donation coordination.
- Created a real-time web-based **anonymous discussion platform** using room-based access, allowing users to connect and communicate without identity disclosure.

PERSONAL INTERESTS

- I regularly spend time at the gym and enjoy strength training, powerlifting and weight lifting
- Enjoy playing volleyball and actively participate whenever possible.
- Like pencil sketching as a creative hobby during free time.
- Recently enjoying bike rides and exploring new routes.
- Developed an interest in marathon events.
